

Molding Your Future with Concrete

Inspiring the Next Generation of Concrete Professionals

What is it?

Molding Your Future with Concrete is an interactive program that introduces middle and high school students to the exciting world of concrete — from mixing and molding to design and construction. Students create their own concrete coasters and other small projects, while learning about real career paths in the concrete and construction industries.

It's educational. It's creative. It's hands-on.
And it's a chance to build something that lasts.

Why It Matters

- The concrete and construction industries need skilled professionals.
- Many students don't realize this can be a fulfilling and high-paying career path.
- Students leave with real experience, tangible creations, and new awareness.

How Sponsors Can Help

We're looking for **industry partners** to support this program through:

- 🏗️ **Material donations** (concrete mix, molds, PPE, tools)
- 💰 **Financial support** to provide kits and materials
- 🧑‍🔧 **Volunteer time** — send company reps to assist at local schools
- 🎤 **Share your story** — give a short talk or demo to inspire students

Help us build excitement — and futures — in the concrete industry.

Interested in Getting Involved?

We'd love to talk with you about sponsorship or volunteering. Let's lay the foundation together!
